

Amendments to the Claims:

This listing of claims will replace all prior versions, and listing, of claims in the application:

Listing of Claims:

1. (currently amended) A method of restoring internal energy flow in the human body of a patient to ~~its~~ a natural pathway of the body, comprising ~~consisting of~~:

placing a first pad with one electrical conductor in direct contact with the patient over the belly button of the body;

placing a second pad with one electrical conductor in direct contact with the patient at point on the left side of the body below the collar bone in a natural depression that is about mid-point between a left shoulder and center line of the body;

placing a third pad with one electrical conductor in direct contact with the patient at point on the right side of the body below the collar bone in a natural depression that is about mid-point between a right shoulder and center line of the body;

providing an electrical connection between the first pad and the second pad by having an electrical conducting wire between the first pad and the second pad;

providing an electrical connection between the first pad and the third pad by having an electrical conducting wire between the first pad and the third pad; and

holding the position of the first, second and third pads for about two to three minutes to allow the transfer of the internal energy flow in the body to its natural pathway.

2. (currently amended) A method of restoring internal energy flow in the human body of a patient to a natural pathway of the body, comprising:

~~The method of claim 1, wherein in-~~

performing a muscle test ~~is performed before placement of the pads to~~ determine if polarity of the body is switched, the muscle test comprising:

placing a thumb and middle finger of a right hand together at tips of the thumb and middle finger of the right hand, so that the tips touch and the thumb and middle finger of the right hand make a circle;

taking a thumb and index finger of a left hand and positioning the thumb and index finger of the left hand so that first phalanges of the thumb and index finger of the left hand are parallel;

inserting the thumb and index finger of the left hand through the circle formed by the right hand;

mentally instructing a brain of the body to keep the thumb and finger of the right hand together for a Yes and to open for a No answer;

with the finger and thumb of the left hand inserted through the circle made by the right hand, trying to open the fingers of the left hand while questioning is the polarity of the body switched, if resistance is met from the fingers of the right hand while trying to open the fingers of the right hand, the answer is Yes, the polarity is switched, if there is a weakness in the right hand and the fingers respond by opening, the answer is No, the polarity is not switched; and

restoring internal energy flow in the human body of a patient to the natural pathway of the body for the polarity being switched, comprising:

placing a first pad with one electrical conductor in direct contact with the patient over the belly button of the body;

placing a second pad with one electrical conductor in direct contact with the patient at point on the left side of the body below the collar bone in a natural depression that is about mid-point between a left shoulder and center line of the body;

placing a third pad with one electrical conductor in direct contact with the patient at point on the right side of the body below the collar bone in a natural depression that is about mid-point between a right shoulder and center line of the body;

providing an electrical connection between the first pad and the second pad by having an electrical conducting wire between the first pad and the second pad;

providing an electrical connection between the first pad and the third pad by having an electrical conducting wire between the first pad and the third pad; and

holding the position of the first, second and third pads for about two to three minutes to allow the transfer of the internal energy flow in the body to its natural pathway.

3. (currently amended) A method of restoring internal energy flow of a patient along a governing meridian in the human body to ~~its~~ a natural pathway of the body, comprising consisting of:

placing a first pad with one electrical conductor in direct contact with the patient in an indentation on a back of the body on a left side of a spine of the body about midway between a tailbone and a waist of the body;

placing a second pad with one electrical conductor in direct contact with the patient in an indentation on the back of the body on a right side of the spine of the body about midway between the tailbone and the waist of the body;

providing an electrical connection between the first pad and the second pad by having an electrical conducting wire between the first pad and the second pad;

holding the position of the first and second pads for about two to three minutes to switch polarity back to normal for the governing meridian to allow the transfer of the internal energy flow in the body to its natural pathway.

4. (currently amended) A method of restoring internal energy flow of a patient along a governing meridian in the human body to a natural pathway of the body, comprising:

~~The method of claim 3, wherein in-~~

performing a muscle test ~~is performed before placement of the pads to~~ determine if polarity of the body is switched, the muscle test comprising:

crossing ankles of the body right over left;

placing a thumb and middle finger of a right hand together at tips of the thumb and middle finger of the right hand, so that the tips touch and the thumb and middle finger of the right hand make a circle;

taking a thumb and index finger of a left hand and positioning the thumb and index finger of the left hand so that first phalanges of the thumb and index finger of the left hand are parallel;

inserting the thumb and index finger of the left hand through the circle formed by the right hand;

mentally instructing a brain of the body to keep the thumb and finger of the right hand together for a Yes and to open for a No answer;

with the finger and thumb of the left hand inserted through the circle made by the right hand, trying to open the fingers of the left hand while

questioning is the polarity of the body switched, if resistance is met from the fingers of the right hand while trying to open the fingers of the right hand, the answer is Yes, the polarity is switched, if there is a weakness in the right hand and the fingers respond by opening, the answer is No, the polarity is not switched; and

restoring internal energy flow of a patient along a governing meridian in the human body to the natural pathway of the body for the polarity being switched, comprising:

placing a first pad with one electrical conductor in direct contact with the patient in an indentation on a back of the body on a left side of a spine of the body about midway between a tailbone and a waist of the body;

placing a second pad with one electrical conductor in direct contact with the patient in an indentation on the back of the body on a right side of the spine of the body about midway between the tailbone and the waist of the body;

providing an electrical connection between the first pad and the second pad by having an electrical conducting wire between the first pad and the second pad;

holding the position of the first and second pads for about two to three minutes to switch polarity back to normal for the governing meridian to allow the transfer of the internal energy flow in the body to its natural pathway.

5. (currently amended) A method of restoring internal energy flow of a patient along a central meridian in the human body to ~~its~~ a natural pathway of the body, comprising consisting of:

placing a first pad with one electrical conductor in direct contact with the patient on a front of the body about one inch above a pubic bone and on a right side of the body;

placing a second pad with one electrical conductor in direct contact with the patient on the front of the body about one inch above the pubic bone and on a left side of the body;

positioning both the first and second pads so that the first and second pads are about three inches apart;

providing an electrical connection between the first pad and the second pad by having an electrical conducting wire between the first pad and the second pad;

holding the position of the first and second pads for about two to three minutes to switch polarity back to normal for the central meridian to allow the transfer of the internal energy flow in the body to its natural pathway.

6. (currently amended) A method of restoring internal energy flow of a patient along a central meridian in the human body to a natural pathway of the body, comprising:

~~The method of claim 5, wherein in-~~

performing a muscle test ~~is performed before placement of the pads to~~ determine if polarity of the body is switched, the muscle test comprising:

crossing ankles of the body left over right;

placing a thumb and middle finger of a right hand together at tips of the thumb and middle finger of the right hand, so that the tips touch and the thumb and middle finger of the right hand make a circle;

taking a thumb and index finger of a left hand and positioning the thumb and index finger of the left hand so that first phalanges of the thumb and index finger of the left hand are parallel;

inserting the thumb and index finger of the left hand through the circle formed by the right hand;

mentally instructing a brain of the body to keep the thumb and finger of the right hand together for a Yes and to open for a No answer;

with the finger and thumb of the left hand inserted through the circle made by the right hand, trying to open the fingers of the left hand while questioning is the polarity of the body switched, if resistance is met from the fingers of the right hand while trying to open the fingers of the right hand, the answer is Yes, the polarity is switched, if there is a weakness in the right hand and the fingers respond by opening, the answer is No, the polarity is not switched; and

restoring internal energy flow of a patient along a central meridian in the human body to the natural pathway of the body for the polarity being switched, comprising:

placing a first pad with one electrical conductor in direct contact with the patient on a front of the body about one inch above a pubic bone and on a right side of the body;

placing a second pad with one electrical conductor in direct contact with the patient on the front of the body about one inch above the pubic bone and on a left side of the body;

positioning both the first and second pads so that the first and second pads are about three inches apart;

providing an electrical connection between the first pad and the second pad by having an electrical conducting wire between the first pad and the second pad;

holding the position of the first and second pads for about two to three minutes to switch polarity back to normal for the central meridian to allow the transfer of the internal energy flow in the body to its natural pathway.
